INTERNAL THREAD INSPECTION SYSTEM
SERIES GJ/GJ

- Range-Adjustable and Fixed-Size Configurations
- The Ideal Inspection System for High Volume or High Value Parts or Applications Demanding a Versatile and Economic Thread Inspection Solution
- Functional Segment Helical Profile Identical in Design to the GO Thread Plug Gage
- Additional Thread Sizes Easily Integrated into Basic Design
- Bench or Portable for In and Out-of-Machine Inspection
- Direct Replacement for Thread GO and NOT GO Thread Plug Gages
- Equal and Simultaneous Segment Engagement
- Self-Centralizing and Self-Supporting
- Integral Segment Flex Eliminator Assures Accuracy and Repeatability
- Capability to Incorporate Extra-Length Gage Elements As Required by Application
- System Linearity and Versatility Eliminates Need for Special Plug Gages
- Hardened Surfaces and Bearing-Actuated Slides Assure Accuracy, Repeatability and Extended Gage Life

- GENERAL SYSTEMS BENEFITS -
Verifies Thread Conformance as Required by AS8879, MIL-S-8879, MIL-S-7742, GM X120, Ford Q101, and ASME Systems 21 and 22
Strict conformance to gage design requirements of FED-STD H/28 and ASME B1.2
Simple and Less Frequent Calibration than Alternative Inspection Methods
Superior Gage Life and Faster Inspection Time
Objective and Uniform Results Free from Operator Influence
Real-Time Process Control at Point of Manufacture
Available with a Wide Range of Analog and Digital Indicators
Compatible with most Process Control Software
Analysis of both Thread Size and Form: Isolates and Detects Angle Error, Lead Error, Non-Uniform Helix, Taper and Two Point Out-of-Round
Hardened Bearing and Adjustment Surfaces Assure Accuracy and Long-Life
Available for Inspection of UN, UNJ, Metric, Metric J, Acme, Buttress and other Thread Forms
Safe and reliable threaded connections depend on the dimensional conformance of both Pitch Diameter Size and Functional Size. Pitch Diameter, as the Minimum Material Limit of External and Internal Threads, is the primary datum for isolating size, form and profile variation. Functional Size, the Maximum Material Limit of External and Internal threads, includes variation in Size, Angle, Lead (including Uniformity of Helix), Taper, and Roundness. This differential inspection of Functional and Pitch Diameter Size assures dimension conformance, reveals the magnitude of thread form error in the manufacturing process, and is the key to both efficient production and ultimate performance. Combined with process targeting based in measured data, control of the differential will minimize process error, optimize initial set-up and production, and assure maximum flank-to-flank engagement in any threaded connection.

**UNDERSTANDING THE SCREW THREAD**

**MUCH MORE THAN JUST INSPECTION SOLUTIONS**

External Inspection Systems • Internal Inspection Systems • FIM/Thread Related Features
GO-NOT GO Attribute Gages • Solid Work Rings with Johnson Pro-Step Setting Plugs
Calibration and Certification Service • Complete Gage Rebuilding: All Makes and Models
Educational Seminars: Regional and In-House • Contract Part Inspection
Dimensional and Thread Manufacturing Consulting • Process Control Integration
Thread Dimensional Software
